**SafeData Educates Market on IBM iSeries High Availability Options
with New White Paper**

Warwick, R.I. – July 7, 2009 – [SafeData, LLC](#), a technology company focused on helping companies protect their data, minimize downtime and recover and restore data quickly, today announced the publication of a new white paper titled “[High Confidence in IBM iSeries High Availability: Six Ways Businesses Can Win Big with High Availability Managed Services](#)”.

Ensuring the operational continuity of today’s 24/7 IBM iSeries environments is critical for the productivity and profitability of a business and the high availability options often come at a high price tag for companies with tight IT budgets. This new white paper discusses the growing trend of outsourcing the management of a business’ high availability environment to experts. It examines the challenges associated with high availability for the iSeries and how using a managed services approach can prove beneficial to a business of any size.

“IT professionals are extremely busy and torn in many different directions,” explained Peter Briggs, president of SafeData. “The daily management of a high availability solution for an IBM iSeries environment can be overwhelming and take IT professionals away from more strategic projects. By using the managed services model, maintenance and testing responsibilities are left in the hands of an IT services provider and businesses can feel more confident that their high availability system will protect their business from costly downtime.”

The white paper is available for download at: http://www.safedata.net/papers_reg_isha.asp.
